images & research are done by going through encyclopedias, industry experts, wikipedia, various blogs, research, some images from web books & reference, research journals, interviews published in other media, surfaces reporter's published issues and others. all for the sake of dissipating information and creating inspiration on the subject of article, write-ups, mostly through direct interactions with the designers/ business owners.

editorial & correspondence: F-1118, chittaranjan park, new delhi-110019
email: vertica@surfaces.in, printed at Modest Print Pack Pvt. Ltd. C-52, DDA Shed, Okhla Industrial Area Phase-1 New Delhi-110020 and published from F-1118, chittaranjan park, new delhi-19 by vertica divedi on behalf of bigsea marcom (i) pvt. ltd.

we accept all materials and publish with care. however, we do not take the responsibility for the authenticity of the same. The views expressed in the columns of surfaces reporter are not necessarily those of the editor or the publisher & they accept no responsibility for them. We take care that colour is matched but take no responsibility for complete matching. Final decisions should not be done about colour without seeing real product/sample. Every design showcased is not about what is available in india-it may as well be for inspiration.

No part of this magazine including advertisements design, prepared by us or through us should be copied, reproduced or transmitted by anyone without prior written permission of the publisher. surfaces reporter and bigsea marcom wish to promote building material & product awareness in true & unbiased way. We do not claim to be experts so feel free to correct us if something needs correction. We are always eager to learn.
All disputes to be settled in delhi (india) jurisdiction only.

SR FASCINATING FACADES

INNOVATIVE DIA-GRID FACADE WITH HIGH-PERFORMANCE GLAZING

JAYESH HARIYANI

Principal Architect, INI Design Studio

INI Design Studio is an acclaimed, multidisciplinary design firm, distinguished by its diverse portfolio and comprehensive array of professional consulting services encompassing Architecture, Engineering, Planning, Urban Design, Landscape Architecture, Sustainability, Interiors, Research, and Art.

The Potash Tower showcases an elegant dia-grid exoskeleton that defines its distinct architectural identity. This intricate triangulated framework not only ensures structural stability but also optimizes spatial efficiency by enabling column-free interiors.

The facade features high-performance, double-skin ceramic fritter glazing with an interstitial air cavity, offering superior insulation against radiant heat and significantly reducing the building's cooling load. The design smartly admits glare-free northern sunlight while shielding the interior from harsh solar exposure. Additionally, the south-western facade houses the service and circulation core, acting as a thermal buffer to minimize heat transfer and enhance overall energy efficiency.

PROJECT DETAILS

Project Name: Potash Tower

Firm: INI Design Studio

Gross Built Area (m2/ ft2): 4795 m2 / 51613 ft2
